Rahul Shome

Test Automation Engineer

9875362570 | rahulshome828@gmail.com | linkedin.com/in/rahulshome01 | github.com/rahulshome121345 | Kolkata, West Bengal

PROFESSIONAL SUMMARY

3+ years of experience as an **SDET** in Healthcare and Insurance domains with strong knowledge of **STLC**, **SDLC**, and **Agile** practices. Hands-on expertise in **UI automation** using **Selenium** with **Java**, **TestNG**, and **Cucumber** (**BDD/TDD**). Skilled in **API automation** (**REST/SOAP**) with **Rest Assured** and **CI/CD** integration using **Jenkins** & **GitHub**. Experienced in working in **Agile environment** and testing team of multiple vendors. Exposure to **RPA** (**A360**) and **AI-assisted development** with **GitHub Copilot** to drive productivity and workflow optimization.

TECHNICAL SKILLS

Programming Language: Core Java

Tools & Technologies: Rally, Eclipse, VS code, Git and GitHub, WinAppDriver (Desktop Automation), SoapUI, PostgreSQL, Jenkins

AI & Emerging Tech: GitHub Copilot, Claude AI (Agentic AI), OpenCV, Cursor, RPA (Automation 360)

Frameworks/Libraries: Selenium, Cucumber, TestNG, Maven, Apache POI, Rest Assured

Manual Testing: Functional, Integration, Regression

PROFESSIONAL EXPERIENCE

Software Development Engineer in Test (SDET) Jul 2025 – Present

Infosys — Client: AETNA — Project: Medicaid — Domain: Healthcare Insurance

- **Developed an automated healthcare PDF validation system** using **Python**, **OpenCV**, and **PyMuPDF** to validate logos, margins, formats, and layout rules reducing manual review time by **85%** (15 to 20 min → 2 to 5 sec) with **99% accuracy** and scaling to **500+ PDFs/day**. Leveraged **GitHub Copilot** and **Claude Opus 4.5** to enhance module design, optimize parsing logic, and accelerate agentic automation workflows. Built **CSV driven configurable rules** and **batch processing** capabilities to eliminate manual inconsistencies and ensure standardized compliance checks across documents.
- **Engineered an AI-assisted Rally automation framework** using **PowerShell**, **REST API**, and **JSON** to auto-generate **Test Cases**, link **Sprint Test Sets**, and post execution results cutting manual effort by **95% (15 min → 30 sec)**. Designed a unified multi-format report analyzer and iteration-mapping logic to ensure consistent test coverage. Built this solution using **GitHub Copilot**, **Claude 4.5 Sonnet**, and **Agentic AI**, enabling team-wide adoption and standardizing QA workflows.
- **Drove** end-to-end automation of **SFDC apps** with Selenium (Java, TestNG), cutting execution time and improving release confidence.
- **Led** automation strategy across **4–5 cross-functional teams**, providing frameworks, solutions, and best practices that ensured consistency and reduced rework by **30%**.
- **Developed scalable data-driven and keyword-driven frameworks** from scratch, fully integrated into CICD pipeline, and **leveraged GitHub Copilot** to accelerate script and framework development, boosting individual productivity by **25–30%** and embedding **AI-driven automation capabilities** into QA processes.
- **Implemented desktop automation** for **Dynamo application** using **WinAppDriver**, reducing manual execution effort by **50–60%** and accelerating regression testing cycles, while **discovering and documenting critical defects** through both **manual** and **automated** execution across varied environments, directly preventing production issues and client escalations.
- **Mentored** junior engineers in framework setup, automation best practices, **script development**, and Agile ways of working, building a stronger, self-sufficient QA team.

Senior Test Engineer Sept 2022 – Jul 2025

Infosys — Client: AETNA — Project: Medicaid — Domain: Healthcare Insurance

- **Designed** and implemented an automation framework with **Selenium (Java, TestNG)** that reduced SAI assessment execution time from **3–4 hours to 30 minutes**, cutting **70% manual effort** for TX & NJ markets.
- **Automated** and maintained **1,000+ regression test cases**, reducing regression effort by **60–70%**, accelerating Agile release cycles, and increasing release confidence.
- **Prevented 285+ potential post–go-live defects** through comprehensive **UI automation (Selenium + TestNG)**, significantly improving product quality and client satisfaction.

- **Partnered** with **E2E** testing teams to consolidate scripts across Scrum teams and **presented** automation outcomes to **stakeholders**, showcasing **time savings, defect reduction, and faster releases** while ensuring **seamless Healthcare test coverage**.
- **Executed** large-scale **API load and stress testing** with **Rest Assured**, validating server stability and performance during peak business hours.
- **Performed SQL database testing** by writing **queries and joins** to identify data mismatches, ensuring **accuracy** and preventing **defects** from propagating to production.
- **Collaborated** with **stakeholders** and participated in **Agile ceremonies** through demos and refinements to align testing with business goals and **SDLC** priorities.

EDUCATION

B.Tech – University of Engineering and Management 2015 – 2019
CGPA: 8.7 Kolkata
